

# Textiles with Positive impact

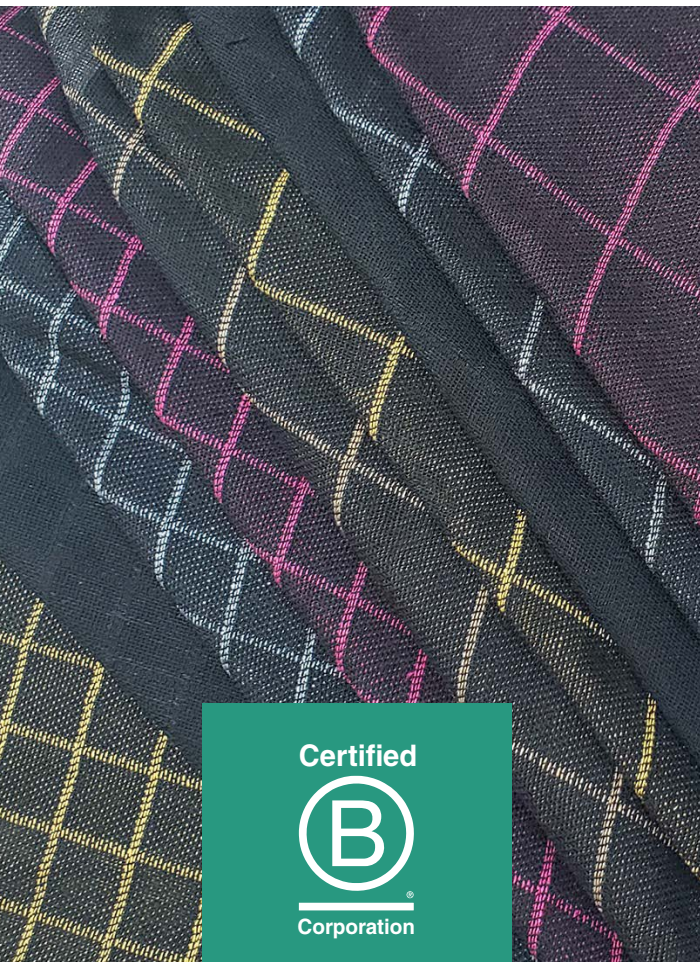

**EcoSimple**  
Sustainable fabrics

# Imagine a world where you can use and reuse everything without harming the environment.

**W**e know this is possible. Global Green is born out of the initiative to make the world a better place for each one of us.

Our wide range of materials come from sustainable producers that care about us and the environment and EcoSimple is a great example of this.

## ECOSIMPLE

# Turning textile waste into new premium recycled fabrics.

In producing our eco responsible textiles, we aim a positive social and environmental impact, stimulating the circular economy and helping the development of local communities.

Our processes guarantee the product renewal cycle, respecting nature and the planet's well being.

## *Applications*

---

- Fashion
- Interior Design
- Upholstery
- Architecture

**We** use cotton pre-consumer waste, rPET bottles and other recycled fibres as raw material resource, diverting it from landfill and incineration. As a result, we become less dependent on virgin materials, avoid using water or chemicals and reduce our CO2 emissions.

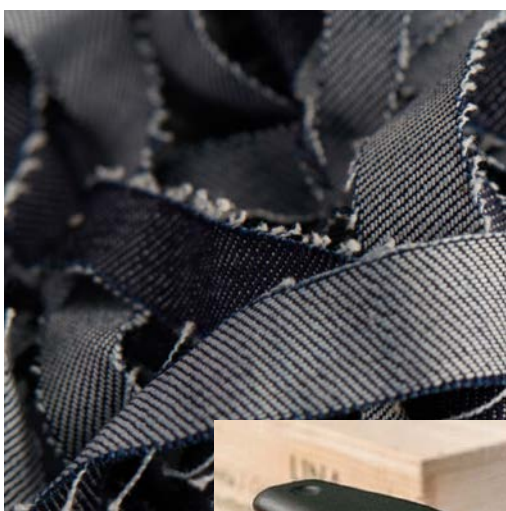

## Textiles with social and environmental impact

**W**e strive to help build a cleaner and greener world by diverting cotton waste, PET bottles and other discarded fibres from ending up in landfills, maximizing recycling efficiency and social impact to achieve excellent sustainability figures. At the same time, we seek to give more benefits to our customers, enabling them to meet their end customer's expectations for sustainable products by using our recycled EcoSimple textiles.

In a world of finite resources and increasing pollution, environmental sustainability requires that we find alternatives to the enormous amount of waste our economy is generating. By repurposing and recycling post-industrial cotton scraps and used PET bottles, we can help to significantly reduce this impact.

As compared with generic textiles made from virgin fibres, the production of EcoSimple has a substantially smaller environmental footprint.
